APPROVAL SHEET

The Capstone Project Entitled "iSECTION: A Decision Support System for BSIT Freshmen Sectioning", prepared and submitted by Caong Lovelyn, Parame Romelyn, Hadjula Kimberly, Lao Mary Jane, has been examined and is hereby recommended for approval and acceptance.

RECOMMENDED:

AMOR DIANNE A. CARILLO, MLIS

Adviser

APPROVED by the IT Project Defense Panel with a grade of

MARVIN C. MEJORADA

Chairperson

DAYAHAN A. BUGAO, MLIS

Panel Member

EDILBERTA G. NAPARAN, MSIT

Panel Member

ACCEPTED AND APPROVED in partial fulfillment of the requirements in Bachelor of Science in Information Technology.

MARIBEL M. ESTIOCO, MST-CS

BSIT – Program Chair

Main Campus

DATE:

ACKNOWLEDGEMENT

The researchers express their sincere gratitude to Mrs. Amor Dianne A. Carillo, their dedicated adviser, for his invaluable guidance and unwavering support throughout the development of this capstone project.

They extend special thanks to Mrs. Maribel M. Estioco, their capstone instructor, for her consistent encouragement and insightful feedback, which significantly contributed to refining their project and deepening their understanding.

The researchers are deeply appreciative of the valuable insights and constructive critiques offered by the panelists, Mr. Marvin C. Mejorada, Mr. Dayahan A. Bugao, and Mrs. Edilberta G. Naparan, during the project presentation. Their thoughtful suggestions inspired the researchers to aim for greater excellence.

Acknowledgment is given to GOD for His divine guidance, which provided strength and sustenance throughout this journey.

The researchers also extend heartfelt gratitude to their beloved parents, whose unwavering support, sacrifices, and unconditional love have been the cornerstone of their success.

As they progress, the researchers carry forward the lessons and encouragement they have received. With profound appreciation and determination, they are committed to applying their skills and knowledge to make meaningful contributions to their communities and beyond.

The Researchers

EXECUTIVE SUMMARY

The study entitled “iSECTION: A Decision Support System for BSIT Freshmen Sectioning” was conducted to address the challenges encountered in organizing and assigning incoming Bachelor of Science in Information Technology (BSIT) freshmen into appropriate sections at J.H. Cerilles State College (JHCSC) – Main Campus. Currently, the sectioning process uses a general-purpose web-based platform that does not fully meet the specific needs of the BSIT program. Because of this limitation, faculty members still experience difficulties in checking exam results, ranking students based on their performance, and assigning them to the most suitable sections. These limitations often result in delays, increased manual work, and challenges in managing large numbers of students during enrollment periods. The primary objective of this project was to develop a web-based decision support system that automates and improves the sectioning process for incoming BSIT freshmen. Specifically, the system was designed to allow students to take the sectioning exam online, automatically evaluate and compute exam scores, and assign students to appropriate sections based on their performance. The study utilized the 4D software development model, which included the stages of defining the system requirements, designing the system structure, developing the application, and testing its functionality before implementation. The system was developed using PHP, JavaScript, HTML, and MySQL as the main technologies. The developed system provides an organized platform for managing exam data, generating student rankings, and producing section assignments automatically, thereby improving the efficiency, accuracy, and reliability of the sectioning process. The implementation of the system is expected to assist administrators and faculty members in managing student placement more effectively while ensuring fair, transparent, and data-driven section assignments for BSIT freshmen.
